

Approximate depth in box cores in 1988 (cm)

The topmost x-radiograph contact prints showing 1954-2004 varves illustrate the sediment structure of box cores taken in Spring 1985, Oct. 1988, and June 2004.

The lower x-radiograph contact print sections showing varves before 1954 were obtained by A. Soutar from box cores recovered in 1964.
